Notes:

(1) Further detailed information could be found in the common reporting format tables of the Party's greenhouse gas inventory, namely "Emission trends (CO₂)", "Emission trends (CH₄)", "Emission trends (N₂O)" and "Emission trends (HFCs, PFCs and SF₆)", which is included in an annex to this biennial report.

(2) 2011 is the latest reported inventory year.

(3) 1 kt CO₂ eq equals 1 Gg CO₂ eq.

Abbreviation: LULUCF = land use, land-use change and forestry.

^a The column "Base year" should be filled in only by those Parties with economies in transition that use a base year different from 1990 in accordance with the relevant decisions of the Conference of the Parties. For these Parties, this different base year is used to calculate the percentage change in the final column of this table.

^b Includes net CO₂, CH₄ and N₂O from LULUCF.

Abbreviations : CRF = common reporting format, LULUCF = land use, land-use change and forestry.

^a The column "Base year" should be filled in only by those Parties with economies in transition that use a base year different from 1990 in accordance with the relevant decisions of the Conference of the Parties. For these Parties, this different base year is used to calculate the percentage change in the final column of this table.

^b Enter actual emissions estimates. If only potential emissions estimates are available, these should be reported in this table and an indication for this be provided in the documentation box. Only in these rows are the emissions expressed as CO₂ equivalent emissions.

^d In accordance with the "Guidelines for the preparation of national communications by Parties included in Annex I to the Convention, Part I: UNFCCC reporting guidelines on annual inventories", HFC and PFC emissions should be reported for each relevant chemical. However, if it is not possible to report values for each chemical (i.e. mixtures, confidential data, lack of disaggregation), this row could be used for reporting aggregate figures for HFCs and PFCs, respectively. Note that the unit used for this row is kt of CO₂ equivalent and that appropriate notation keys should be entered in the cells for the individual chemicals.)

Custom Footnotes**Documentation Box:**

Table 2(a)

LTU_BR2_v1.0

Description of quantified economy-wide emission reduction target: base year^a

<i>Party</i>	<i>Lithuania</i>	
Base year /base period	1990	
Emission reduction target	% of base year/base period	% of 1990 ^b
	20.00	
Period for reaching target	BY-2020	

^a Reporting by a developed country Party on the information specified in the common tabular format does not prejudice the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.

^b Optional.

Description of quantified economy-wide emission reduction target: gases and sectors covered^a

<i>Gases covered</i>		<i>Base year for each gas (year):</i>
CO ₂		1990
CH ₄		1990
N ₂ O		1990
HFCs		1995
PFCs		1995
SF ₆		1995
NF ₃		1995
Other Gases (specify)		
Sectors covered ^b	Energy	Yes
	Transport ^f	Yes
	Industrial processes ^g	Yes
	Agriculture	Yes
	LULUCF	No
	Waste	Yes
	Other Sectors (specify)	

Abbreviations : LULUCF = land use, land-use change and forestry.

^a Reporting by a developed country Party on the information specified in the common tabular format does not prejudice the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.

^b More than one selection will be allowed. If Parties use sectors other than those indicated above, the explanation of how these sectors relate to the sectors defined by the IPCC should be provided.

^f Transport is reported as a subsector of the energy sector.

^g Industrial processes refer to the industrial processes and solvent and other product use sectors.

Description of quantified economy-wide emission reduction target: global warming potential values (GWP)^a

<i>Gases</i>	<i>GWP values^b</i>
CO ₂	4th AR
CH ₄	4th AR
N ₂ O	4th AR
HFCs	4th AR
PFCs	4th AR
SF ₆	4th AR
NF ₃	4th AR
Other Gases (specify)	

Abbreviations : GWP = global warming potential

^a Reporting by a developed country Party on the information specified in the common tabular format does not prejudice the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.

^b Please specify the reference for the GWP: Second Assessment Report of the Intergovernmental Panel on Climate Change (IPCC) or the Fourth Assessment Report of the IPCC.

Description of quantified economy-wide emission reduction target: approach to counting emissions and removals from the LULUCF sector^a

Role of LULUCF	LULUCF in base year level and target	Excluded
	Contribution of LULUCF is calculated using	

Abbreviation : LULUCF = land use, land-use change and forestry.

^a Reporting by a developed country Party on the information specified in the common tabular format does not prejudge the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.

Description of quantified economy-wide emission reduction target: market-based mechanisms under the Convention^a

<i>Market-based mechanisms under the Convention</i>	<i>Possible scale of contributions (estimated kt CO₂ eq)</i>
CERs	
ERUs	
AAUs ⁱ	
Carry-over units ^j	
Other mechanism units under the Convention (specify) ^d	

Abbreviations : AAU = assigned amount unit, CER = certified emission reduction, ERU = emission reduction unit.

^a Reporting by a developed country Party on the information specified in the common tabular format does not prejudice the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.

^d As indicated in paragraph 5(e) of the guidelines contained in annex I of decision 2/CP.17 .

ⁱ AAUs issued to or purchased by a Party.

^j Units carried over from the first to the second commitment periods of the Kyoto Protocol, as described in decision 13/CMP.1 and consistent with decision 1/CMP.8.

Description of quantified economy-wide emission reduction target: other market-based mechanisms^a

<i>Other market-based mechanisms (Specify)</i>	<i>Possible scale of contributions (estimated kt CO₂ eq)</i>

^a Reporting by a developed country Party on the information specified in the common tabular format does not prejudice the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.

Description of quantified economy-wide emission reduction target: any other information^{a,b}

--

^a Reporting by a developed country Party on the information specified in the common tabular format does not prejudice the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.

^b This information could include information on the domestic legal status of the target or the total assigned amount of emission units for the period for reaching a target. Some of this information is presented in the narrative part of the biennial report.

Custom Footnotes

(Decision No 406/2009/EC). These legally binding trajectories not only result in a 20% GHG reduction in 2020 compared to 1990 but also define the EU's annual target pathway to reduce EU GHG emissions from 2013 to 2020. The Effort Sharing Decision sets annual national emission targets for all Member States for the period 2013-2020 for those sectors not covered by the EU emissions trading system (ETS), expressed as percentage changes from 2005 levels. In March 2013, the Commission formally adopted the national annual limits throughout the period for each Member State. By 2020, the national targets will collectively deliver a reduction of around 10% in total EU emissions from the sectors covered compared with 2005 levels. The emission reduction to be achieved

Table 3

LTU_002_v1.0

Progress in achievement of the quantified economy-wide emission reduction target: information on mitigation actions and their effects

Name of mitigation action ¹	Service/ ² affected ³	GHGs/ ⁴ affected ⁵	Emission and/or activity affected ⁶	Type of instrument ⁷	State of implementation ⁸	Brief description ⁹	Start year of implementation	Implementing entity or entities	Estimated mitigation impact (net cumulative, in M t CO ₂ eq) ¹⁰
Promotion of the use of renewable energy sources (except biomass sector)	Energy	CO ₂	Increase in renewable energy use	Other (Regulatory)	Implemented	Lithuania has set an interim target for increasing the share of RES in total final energy consumption to 23 percent by 2020.	2007	Ministry of Energy, Environment, Agriculture, and Forestry.	147
Increasing the energy efficiency	Energy, Transport, Industry/industry	CO ₂	Efficiency improvement in the energy and transportation sector	Voluntary (Administrative)/Other (Regulatory)	Implemented	The National Energy Independence Strategy determines the target to conserve 1.5 % of energy annually (in constant 2004 kcal). The target also involves modernization of buildings. Implementation of Energy Efficiency Action Plan provides for this energy saving to amount to 740 kwh of final energy by 2020 (2005 = 100%). To reach this target, Lithuania will have to reduce its final energy consumption of 2005 level by 2014 at 3 307 GWh (272 kwh). In order to fully recognize potential of Energy Efficiency in industrial sector, in December 2012 1511 of the European Parliament and of the Council of 15 October 2012 on energy efficiency in industrial law, in 2014 the draft Law on Energy Efficiency was proposed. In the draft law is determined that the system of energy efficiency commitment starts to enter into force by 31 December 2020 and energy in the final consumption will reach 237 kwh. Energy Efficiency Obligation Scheme is being created for the transport, also energy will be used by introducing energy efficient and public buildings. By the end of 2015, a total of 1 000 GWh (110 kwh) will be saved, i.e. saving the potential of 100 GWh (110 kwh) will be achieved through the signed voluntary agreements between the Ministry of Energy and energy companies.	2011	Ministry of Energy, Environment, Forestry, Internal Affairs, Finance, and Communications, Local authorities (municipalities).	1496
Promotion of renewable energy sources use in transport sector	Transport	CO ₂	Low carbon technologies use	Regulatory/Biofuel (Administrative)	Implemented	The Law of the Republic of Lithuania on Renewable Energy Resources was adopted on 12 May 2011 by the Parliament of the Republic of Lithuania (Lietuvos Respublikos Seimas). The Law establishes the policy of the State to increase the share of RES biomass and bioenergy (in respect to the target to increase the share of RES biomass and bioenergy 10 % of total electricity in comparison with the final consumption of the energy in the transport sector. The implementation for blending of biomass into the national fuel mix will be for the extent of 5% and in diesel fuel not less than 7%. The RES in the transport sector is presented through the mechanisms by the National Payment Agency of the Ministry of Agriculture, of an amount for fuel production, an amount available and an exemption from environmental pollution tax. The National Programme on Development of Fuel and Chemicals for 2014-2022 sets the goal to promote the use of bioethanol fuel and bio-diesel and on the steps to reach that from solid raw materials will be about 1000 t in 2022.	2007	Ministry of Energy, Transport and Communications, Forestry, Interior and Agriculture.	421
Implementation of Nitrate Directive*	Agriculture	CH ₄ , N ₂ O, CO ₂	Other activities improving nitrogen management, improved animal waste management systems, Activities improving grazing land or grassland management.	Other (Regulatory)	Implemented	Implementation of the Council Directive of 12 December 1991 concerning the protection of waters against pollution caused by nitrates from agricultural sources (the NITRATE Directive) with the later amendments by the Regulation (EC) No 1173/2004 of the European Parliament and of the Council of 22 October 2004 (Nitrates Directive) is currently directed towards the reduction of the nitrates pollution in the agricultural sector. Activities are implemented for the establishment of modern farms and other farms, which include the correct grazing pasture provision into the surroundings. Sub replacement of modern grazing pasture from which on dry days no liquid effluent lead to a reduction in emissions of nitrate compounds into atmosphere by up to 20 times.	2004	Ministry of Agriculture, Energy and Forestry.	100
Increasing the National Forest Financing*	Forestry	CO ₂	Enhancing production in existing forests, afforestation and reforestation.	Regulatory/Other (Administrative)	Implemented	The National Forest Action Development Program 2012-2020 approved by Resolution No 169 of the Government of the Republic of Lithuania of 27 May 2012 is sought to increase forest coverage of the country up to 24.7 % by 2020. To increase forest area by 7% and 2020.	2005	Ministry of Environment and Agriculture.	1480
Decreasing the amount of biodegradable waste in landfill*	Waste management/waste	CH ₄	Reduced landfilling	Other (Planning)	Implemented	The National Strategic Waste Management Plan 2007-2011 was updated in April 2014 with the National Waste Management Plan for 2014-2020 (Resolution No 119 of the Government of Lithuania). The plan to increase amount of landfill biodegradable wastes and waste entering the biodegradable material waste would not exceed more than 33 % until 2020, compared with the year 2008 quantities of the biodegradable material waste. Regarding the PAB of green waste composting that was installed and it is planned to install more in Lithuania. In 2014 in those 49 towns comprising about 4100 houses of green waste was composted. The National Waste Management Plan for 2014-2020 sets the goal by the 2020 the approximately 100 000 t of green waste will be composted.	2007	Ministry of Environment and Regional Waste Management Centers.	158
Promoting the collection and use of biogas from landfills*	Waste management/waste	CH ₄	CH ₄ collection and use from landfills.	Other (Regulatory)	Implemented	According to the data of the Regional waste management centres and the National Waste Management Plan for 2014-2020 a planned increase approximately 11 mln. m ³ of biogas from all landfills. It was also planned to build 4 biological treatment plants with biogas production in Aikste, Paberzė, Leliai and Utena regions till the end of 2015.	2014	Ministry of Environment and Regional Waste management centers.	1940
Production process change to create competitive	Industry/industry	CO ₂	Installation of advanced technologies	Economic	Implemented	In 2015 the only cement manufacturing company "Alkantis Cementas" ended modernization of technology process, who was cement production instead use changed to dry. This modernization allows saving the fuel consumption by 4% in the production and by 4% in the transport. To compare to production 1 t of clinker using wet method 1.2 t of CO ₂ is emitted and 0.8 t of CO ₂ is emitted by the method. The Alkantis "Alkantis Cementas" to reduce CO ₂ level by 200 t/CO ₂ volume.	2013 (2006 instead)	Cement producing company	500
Technological improvement in chemical industry*	Industry/industry	N ₂ O	Installation of advanced technologies	Economic	Implemented	To reduce the pollution with N ₂ O gas emissions in the nitrogen fertilizer production company 2 (Pigeon) of CO ₂ emissions reduction in chemical industry was conducted. The estimated CO ₂ emissions reduction is 141 011 t/CO ₂ . It was estimated that reduced implementation of these projects in 2013 the 1.7 % more volume emissions could be by 1.5 t CO ₂ higher (0.7 % increased carbon 7.5 on 1 t CO ₂ eq).	2009	Chemical producing factories	156

Note: The two final columns specify the year identified by the Party for estimating impacts (based on the status of the measure and whether an ex-ante or a status estimate is available).

Abbreviations: CH₄ - methane gas; LULUCF - land use, land-use change and forestry.

* Parties should use an asterisk (*) to indicate that a mitigation action is included in the "with measures" projection.

¹ To the extent possible, the following services should be used: energy, transport, industry/industrial processes, agriculture, forestry, LULUCF, waste management/waste, other services, carbon capture or sequestration.

² To the extent possible, the following types of instruments should be used: economic, fiscal, voluntary agreement, regulatory, administrative, education, research, other.

³ To the extent possible, the following discipline names should be used to report on the status of implementation implemented, adopted, planned.

⁴ Additional information may be provided in the case of the mitigation actions and the relevant instrument.

⁵ Optimal year or years should be shown by the Party.

Source: Parties

Abbreviation : GHG = greenhouse gas, LULUCF = land use, land-use change and forestry.

^a Reporting by a developed country Party on the information specified in the common tabular format does not prejudice the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.

^b For the base year, information reported on the emission reduction target shall include the following: (a) total GHG emissions, excluding emissions and removals from the LULUCF sector; (b) emissions and/or removals from the LULUCF sector based on the accounting approach applied taking into consideration any relevant decisions of the Conference of the Parties and the activities and/or land that will be accounted for; (c) total GHG emissions, including emissions and removals from the LULUCF sector. For each reported year, information reported on progress made towards the emission reduction targets shall include, in addition to the information noted in paragraphs 9(a–c) of the UNFCCC biennial reporting guidelines for developed country Parties, information on the use of units from market-based mechanisms.

^c Parties may add additional rows for years other than those specified below.

^d Information in this column should be consistent with the information reported in table 4(a)I or 4(a)II, as appropriate. The Parties for which all relevant information on the LULUCF contribution is reported in table 1 of this common tabular format can refer to table 1.

Custom Footnotes

Numbers for LULUCF are not reported because this sector is not included under the Convention target

Note: 2011 is the latest reporting year.

^a Reporting by a developed country Party on the information specified in the common tabular format does not prejudice the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.

^b For each reported year, information reported on progress made towards the emission reduction target shall include, in addition to the information noted in paragraphs 9(a-c) of the reporting guidelines, on the use of units from market-based mechanisms.

^c Parties may include this information, as appropriate and if relevant to their target.

^d Units surrendered by that Party for that year that have not been previously surrendered by that or any other Party.

^e Additional rows for each market-based mechanism should be added, if applicable.

Custom Footnotes

The ESD allows Member States (MS) to make use of flexibility provisions for meeting their annual targets, with certain limitations. There is an annual limit of 3% for the use of project-based credits for each MS in order to comply with the annual targets. The compliance assessment for 2013 under the ESD has not yet started due to delay in submissions of National GHG Inventories. The need to use the units for meeting 2013 ESD target will be clear only in 2016.

Information on updated greenhouse gas projections under a ‘with measures’ scenario^a

	<i>GHG emissions and removals^b</i>							GHG emission projections	
	<i>(kt CO₂ eq)</i>							<i>(kt CO₂ eq)</i>	
	<i>Base year (1990)</i>	1990	1995	2000	2005	2010	2013	2020	2030

Abbreviations : GHG = greenhouse gas, LULUCF = land use, land-use change and forestry.

^a In accordance with the “Guidelines for the preparation of national communications by Parties included in Annex I to the Convention, Part II: UNFCCC reporting guidelines on national communications”, at a minimum Parties shall report a ‘with measures’ scenario, and may report ‘without measures’ and ‘with additional measures’ scenarios. If a Party chooses to report ‘without measures’ and/or ‘with additional measures’ scenarios they are to use tables 6(b) and/or 6(c), respectively. If a Party does not choose to report ‘without measures’ or ‘with additional measures’ scenarios then it should not include tables 6(b) or 6(c) in the biennial report.

^b Emissions and removals reported in these columns should be as reported in the latest GHG inventory and consistent with the emissions and removals reported in the table on GHG emissions and trends provided in this biennial report. Where the sectoral breakdown differs from that reported in the GHG inventory Parties should explain in their biennial report how the inventory sectors relate to the sectors reported in this table.

^c 20XX is the reporting due-date year (i.e. 2014 for the first biennial report).

^d In accordance with paragraph 34 of the “Guidelines for the preparation of national communications by Parties included in Annex I to the Convention, Part II: UNFCCC reporting guidelines on national communications”, projections shall be presented on a sectoral basis, to the extent possible, using the same sectoral categories used in the policies and measures section. This table should follow, to the extent possible, the same sectoral categories as those listed in paragraph 17 of those guidelines, namely, to the extent appropriate, the following sectors should be considered: energy, transport, industry, agriculture, forestry and waste management.

^e To the extent possible, the following sectors should be used: energy, transport, industry/industrial processes, agriculture, forestry/LULUCF, waste management/waste, other sectors (i.e. cross-cutting), as appropriate.

^f Parties may choose to report total emissions with or without LULUCF, as appropriate.

Provision of capacity-building support^a

<i>Recipient country/region</i>	<i>Targeted area</i>	<i>Programme or project title</i>	<i>Description of programme or project^{b,c}</i>

^a To be reported to the extent possible.

^b Each Party included in Annex II to the Convention shall provide information, to the extent possible, on how it has provided capacity-building support that responds to the existing and emerging capacity-building needs identified by Parties not included in Annex I to the Convention in the areas of mitigation, adaptation and technology development and transfer.

^c Additional information may be provided on, for example, the measure or activity and co-financing arrangements.
